CS5500 Software Development

Final Deliverables Team 106

The presentation is good, but spending more than half the time giving a
demo (in effect) didn't add much given how it was staged. The quality
vignette with the TA comments is a nice example of a well substantiated
claim. More substantiation for the other claims would make this a better
talk (e.g. the claim "It is in good shape to give to the clients" is
never supported).

System demo is very nice. The UX and the UI are very good. Good
aesthetic. Even better, the focus and information is very, very clear.
Small issue – there are a lot of English (presentation layer) issues.
The system stats page is *very cool.*

System install video is very good. Excellent use of Jenkins.

Nice work!
